
Bolivian fire station uses photovoltaic folding container earthquake-resistant type

Asymmetric total synthesis of fortimicin B was realized in 12 steps (LLS) from readily available starting materials. The fortamine fragment was synthesized in a concise ...

The enantioselective total synthesis was efficiently accomplished from the key intermediate (S)- 6 with three contiguous stereocenters in 5 steps and the synthetic 1 induced ...

Herein, we present the successful design and development of a new strategy for the first enantioselective total synthesis of C11-demethoxymelotenine (2), 3-oxotabersonine ...

Herein, we disclose the development of an enantioselective route to (-)- 5-? for the total synthesis of (-)- 1. Enantioselective intermolecular Mannich, Lewis acid-mediated ...

Bipolarolides A and B are members of the ophiobolin family of sesterterpenes, characterized by their intricate cage-like structures. Herein we report a concise asymmetric ...

B Second-generation synthesis of chiral amine fragment 23 from (R)-pulegone. C N -deletion of 22 and total synthesis of lycoposerramine W 6. D Selected results from benzylic ...

Cephalotaxus diterpenoids are attractive natural products with intriguing molecular frameworks and promising biological features. As a structurally unusual member, (-) ...
