# Flywheel energy storage and solar thermal power generation

A flywheel is used to even out impulse, and to store energy (these are both the same thing in reality) An engine, especially when running slowly (such as when starting) has ...

No grinding, no clicking, just spinning freely, but wouldn't engage flywheel. Got another starter figuring this one was shot, preventing it from engaging the flywheel, and in the ...

The mechanism to engage the flywheel is faulty, probably the solenoid that activates it is either faulty (it moves its internal parts to make contact and so the motor spins, ...

A flywheel serves four main purposes (in most vehicles): It provides mass for rotational inertia to keep the engine in motion It is specifically weighted to provide balance for ...

The starter motor has a small gear ( the pinion gear) which sticks out on a shaft to engage the flywheel. if the pinion gear doesn't stick out far enough, it will spin but not turn the ...
