
PolandPrenzlau Hybrid Power Station

What's going on with the enertrag hybrid power plant in Prenzlau?

French company McPhy Energy has given an update on the operation and performance of the Enertrag hybrid power plant in Prenzlau, Germany. Since the hydrogen injection system came online in November, more than 100 MWh of surplus wind energy has been converted into hydrogen and injected into the gas supply network.

Who built the Prenzlau hybrid power plant?

The Prenzlau hybrid power plant was built by Enertrag, with support from the European Union, Deutsche Bahn (German Railways), the French oil & gas company Total, and Swedish power company Vattenfall [see the News Feature in FCB, May 2012].

What is the world's First Wind-Hydrogen Hybrid power plant?

Brandenburg Minister, Matthias Platzeck opened the world's first wind-hydrogen hybrid power plant, on the 25 October near the town of Prenzlau Uckermark. The plant, built by ENERTRAG AG together with TOTAL Germany, Vattenfall and the Deutsche Bahn is a hydrogen-Hybrid plant which combines wind energy sources, Biogas and hydrogen.

How has McPhy Energy adapted the existing hybrid power plant?

McPhy Energy has modified and adapted the existing hybrid power plant, and built the interface to the gas injection system.

A new hybrid power plant in Prenzlau, Germany is the first full scale european project converting wind energy to hydrogen. Hydrolysis is used to produce hydrogen from the turbines which can be used for fuel ...

Renewable energy company Enertrag SE has agreed to purchase a site for a 130-MW green hydrogen production plant in Prenzlau, north-eastern Germany, reaching a key ...

Download scientific diagram | Prenzlau hybrid power plant combining a biogas unit, three wind turbines of 2 MW each, two CHP plants and an electrolysis unit generating hydrogen. 45 from ...

A further important issue is to deliver green hydrogen for mobility. In fact, the hybrid power plant supplies hydrogen to the first CO₂-free hydrogen filling station of Total in ...

Described as "a world premiere", the Prime Minister of the State of Brandenburg, Matthias Platzeck, put into operation a hydrogen-hybrid power station in Prenzlau located ...

A new hybrid power plant in Prenzlau, Germany is the first full scale european project converting wind energy to hydrogen. Hydrolysis is used to produce hydrogen from the ...

Renewable energy company Enertrag SE has agreed to purchase a site for a 130-MW green hydrogen production plant in Prenzlau, north-eastern Germany, reaching a key milestone in

the realisation of the ...

In addition, several trailer filling stations will be built to ensure flexible supply. Actively shaping economic development The new production site will be integrated into an ...
