What are the different types of AC inverters?

The three most common types of inverters made for powering AC loads include: (1) pure sine wave inverter (for general applications), (2) modified square wave inverter (for resistive, capacitive, and inductive loads), and (3) square wave inverter (for some resistive loads) (MPP Solar, 2015).

Which inverter can take DC & AC input?

For On-Grid Systems, generally the DC capacity and AC capacity (of inverter) are very much similar. Hence here we shall look for inverter which can take min. 4.225kWp (DC) input. Looking at datasheet, 4.0kW inverter (Model: KSY 4kW) has "Max Peak DC Input Power" of 4.8kWp and hence that inverter serves the purpose.

What is a high-frequency capacitive AC link in a PV inverter?

Instead of a capacitive dc link that decouples the dc-dc converter and the voltage source inverter in traditional two-stage PV inverters, a high-frequency capacitive ac link is employed in the proposed inverter, which enables exploiting a very small film capacitor, rather than a bulky electrolytic capacitor, for transferring power.

How does a PV inverter state machine work?

The inverter state machine then sequences to checking for DC voltage. To feed current into the grid the DC voltage (which in case of PV inverters is provided from the panel or panel plus some conditioning circuit), it must be greater than the peak of the AC voltage connected at the output of the inverter.
