
What is the Farmers solar Energy Storage Project

This section for members of the British Farming Union to discuss farming matters, have votes and support farmers. As a democratic organisation, we strive to protect British ...

More farmers are getting closer to retirement age, with not enough young farmers coming through to fill their places. Meanwhile, the demand for food is rising as the global ...

This report describes a breakthrough model for financing and collaboration to support farmers and accelerate the transition to sustainable food production.

Government, smallholder farmers and other actors cannot work in silos to improve agricultural productivity and ensure a food-secure future.

The AI for Agriculture Innovation initiative is transforming the agriculture sector in India by promoting the use of artificial intelligence and other technologies.

Smallholder farmers produce about one-third of the world's food but need climate, financial and technological support to ensure global food security.

Regenerative agriculture enhances climate resilience by restoring soil health, sequestering carbon and boosting biodiversity, making food systems more sustainable.

A shift towards regenerative agriculture can improve our ecosystems. But farmers need support to change their practices via access to better funding models.
